

1. India fell short of 1.9 million units of blood and 6 Unit of Blood Requirement for Heart Surgery, and 50 Units for Automobile Accidents. [Refence Link](#)
2. A 46-year-old woman died in Uttar Pradesh's Mainpuri district on Sunday after her family failed to get an ambulance for her on time.
it was revealed that her family called for ambulance service on '108' and one driver did not pick up the call while another driver told the call centre that his vehicle had a punctured tyre. [Refence Link](#)
3. A family medical history can identify people with a higher-than-usual chance of having common disorders, such as heart disease, high blood pressure, stroke, certain cancers, and diabetes. Knowing one's family medical history allows a person to take steps to reduce his or her risk. [Refence Link](#)
4. Serious health issues your fitness tracker can pick up
Wearable fitness devices can do more than get you moving they could save your life.
 - Heart rate irregularities could point to heart disease
 - The rhythm of your heart: detecting atrial fibrillation
 - Weight gain or loss could be a sign of kidney or heart disease, diabetes, or cancer
 - For sleep tracking, it may be too soon to spot problems[Refence Link](#)
5. According to Times of India about 146,133 people were killed in road accidents in India in the year 2016. Unfortunately about 30% of deaths are caused due to delayed ambulance.
